EXPLANATORY NOTES

1. **Source of Data.** Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods imported is the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing on the date at which the goods were actually despatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.
3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are items such as "engines, gas, n.o.p., and parts" which show a quantity in "number" as well as value. In these items the "number" refers only to the number of substantially complete articles imported, while the value includes also the value of any parts of the article imported. For such items the average value per unit cannot be ascertained.

4. **Coverage.** Statistics of imports include all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series, therefore, includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
5. **Exclusions.** Import statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the article. A small amount of gold scrap in the form of jewellers' sweepings is also included. Some goods for the use of United States forces stationed at treaty bases in Canada are excluded, as are ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, and Canadian-owned military equipment returned to Canada.
6. **Countries Credited.** Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. This class of imports is credited to the country in which the goods originated.
7. **Time Periods.** Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of articles used in this report are abbreviated or incomplete because of mechanical limitations. Full descriptions of all articles appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for".
9. **Revisions.** All statistics in this report are subject to revision.

EXPLANATORY NOTES

1. **Source of Data.** Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods imported is the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing on the date at which the goods were actually despatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.
3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are items such as "engines, gas, n.o.p., and parts" which show a quantity in "number" as well as value. In these items the "number" refers only to the number of substantially complete articles imported, while the value includes also the value of any parts of the article imported. For such items the average value per unit cannot be ascertained.
4. **Coverage.** Statistics of imports include all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series, therefore, includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
5. **Exclusions.** Import statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the article. A small amount of gold scrap in the form of jewellers' sweepings is also included. Some goods for the use of United States forces stationed at treaty bases in Canada are excluded, as are ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, and Canadian-owned military equipment returned to Canada.
6. **Countries Credited.** Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. This class of imports is credited to the country in which the goods originated.
7. **Time Periods.** Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of articles used in this report are abbreviated or incomplete because of mechanical limitations. Full descriptions of all articles appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for".
9. **Revisions.** All statistics in this report are subject to revision.

CHANGES IN IMPORT STATISTICAL CLASSIFICATION EFFECTIVE JULY 1ST, 1958

The changes in the Canadian Customs Tariff effective June 18, 1958, necessitated several changes in Canadian import statistics, especially in those relating to primary iron and steel. Many statistical classes formerly related directly to customs tariff items which were abolished and replaced by new tariff items, and it was not practical to continue these statistical classes past June 30. Modifications to some other tariff items required corresponding modifications in the content and description of other statistical classes, and these modifications were made with the same effective date.

The following list of changes in the import statistical classification is divided into four parts. The first deals with statistical classes which could not be continued after June 30, and which do not match closely any of the new classes established as of July 1. In this and subsequent reports for 1958 these classes will be re-numbered and presented under their new code numbers. The statistics shown for these classes will be cumulative figures for the period January 1 - June 30, 1958. The second part of the list deals with cancelled classes which will be included in either new or pre-existing classes. These classes, as such, disappear entirely from this and subsequent reports, but cumulative totals for the period January 1 - June 30, 1958, are included with totals for the classes indicated. The third part deals with the new classes established as of July 1. Cumulative figures for these classes cover only the elapsed period of 1958 subsequent to July 1, except for those classes mentioned in part 2 of the list, and each of these classes will bear an appropriate footnote reference in reports covering the last six months of 1958. The fourth part of the list shows in full the new readings of those statistical classes where modifications in content (or changes in the wording of relevant tariff items) made these desirable.

1. Classes Discontinued After June 30, and Re-numbered for Inclusion in Current Reports (the cumulative figures shown under the new code numbers relate only to the period January 1 - June 30, 1958):

EXPLANATORY NOTES

1. **Source of Data.** Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods imported is the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing on the date at which the goods were actually despatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.
3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are items such as "engines, gas, n.o.p., and parts" which show a quantity in "number" as well as value. In these items the "number" refers only to the number of substantially complete articles imported, while the value includes also the value of any parts of the article imported. For such items the average value per unit cannot be ascertained.

4. **Coverage.** Statistics of imports include all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series, therefore, includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
5. **Exclusions.** Import statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the article. A small amount of gold scrap in the form of jewellers' sweepings is also included. Some goods for the use of United States forces stationed at treaty bases in Canada are excluded, as are ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, and Canadian-owned military equipment returned to Canada.
6. **Countries Credited.** Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. This class of imports is credited to the country in which the goods originated.
7. **Time Periods.** Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of articles used in this report are abbreviated or incomplete because of mechanical limitations. Full descriptions of all articles appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for".
9. **Revisions.** All statistics in this report are subject to revision.

CHANGES IN IMPORT STATISTICAL CLASSIFICATION EFFECTIVE JULY 1ST, 1958

The changes in the Canadian Customs Tariff effective June 18, 1958, necessitated several changes in Canadian import statistics, especially in those relating to primary iron and steel. Many statistical classes formerly related directly to customs tariff items which were abolished and replaced by new tariff items, and it was not practical to continue these statistical classes past June 30. Modifications to some other tariff items required corresponding modifications in the content and description of other statistical classes, and these modifications were made with the same effective date.

The following list of changes in the import statistical classification is divided into four parts. The first deals with statistical classes which could not be continued after June 30, and which do not match closely any of the new classes established as of July 1. In this and subsequent reports for 1958 these classes will be re-numbered and presented under their new code numbers. The statistics shown for these classes will be cumulative figures for the period January 1 - June 30, 1958. The second part of the list deals with cancelled classes which will be included in either new or pre-existing classes. These classes, as such, disappear entirely from this and subsequent reports, but cumulative totals for the period January 1 - June 30, 1958, are included with totals for the classes indicated. The third part deals with the new classes established as of July 1. Cumulative figures for these classes cover only the elapsed period of 1958 subsequent to July 1, except for those classes mentioned in part 2 of the list, and each of these classes will bear an appropriate footnote reference in reports covering the last six months of 1958. The fourth part of the list shows in full the new readings of those statistical classes where modifications in content (or changes in the wording of relevant tariff items) made these desirable.

1. Classes Discontinued After June 30, and Re-numbered for Inclusion in Current Reports (the cumulative figures shown under the new code numbers relate only to the period January 1 - June 30, 1958):

EXPLANATORY NOTES

1. **Source of Data.** Statistics of imports are based upon the declarations of importers (import entries) as subsequently checked by customs officials.
2. **Valuation.** The value of goods imported is the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing on the date at which the goods were actually despatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.
3. **Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are items such as "engines, gas, n.o.p., and parts" which show a quantity in "number" as well as value. In these items the "number" refers only to the number of substantially complete articles imported, while the value includes also the value of any parts of the article imported. For such items the average value per unit cannot be ascertained.

4. **Coverage.** Statistics of imports include all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series, therefore, includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.
5. **Exclusions.** Import statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the article. A small amount of gold scrap in the form of jewellers' sweepings is also included. Some goods for the use of United States forces stationed at treaty bases in Canada are excluded, as are ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, and Canadian-owned military equipment returned to Canada.

6. **Countries Credited.** Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. This class of imports is credited to the country in which the goods originated.

7. **Time Periods.** Import statistics for any month include all goods declared on import entries received at the Bureau of Statistics during the calendar month in question.
8. **Abbreviations.** Many descriptions of countries and articles used in this report are abbreviated or incomplete because of mechanical limitations. A key to abbreviations of countries appears in this report, and full descriptions of all articles appear in Volume III of the annual report "Trade of Canada". The letters "N.O.P." mean "not otherwise provided for".
9. **Revisions.** All statistics in this report are subject to revision. Revisions to previous reports are published on the coloured pages at the beginning of each monthly report.
